- [] Change Felt when not getting a consistant glue coverage (1 shift - maybe once a year)
- [] Or when it's looking rady.
- [] Don't let felt dry out over the the weekend.

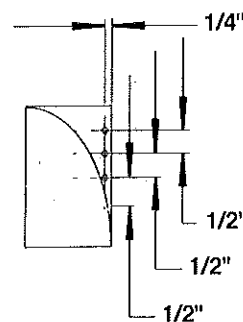

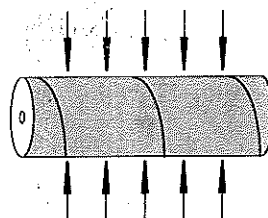

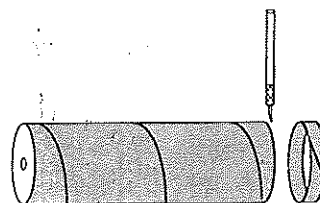

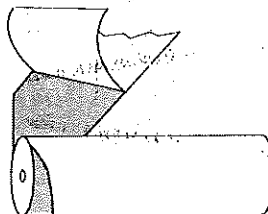

2. Before removing white backing from felt strip, wrap felt around roll to see how it fits.

3. Stick the felt strip onto the roll, peeling the white backing off as you go. Press all seams together snugly, leaving no gaps.

4. Using a sharp knife, trim the ends of the felt strip so they're flush with the ends of the glue roll.

5. Press the felt strip down at all places to ensure that it has stuck well to the roll, especially at the seam.

6. Drill (3) #29 Holes in each end of the felt. Pop-Rivet each hole.

Note: Old felt backing can be removed with MEK, Acetone or low-flash Naptha. Or Lacquer Thinner

Glue Roll - w/Spirally Wound Felt
