Handling and Care Instruction for your Etched Glass

**Read Carefully**  
**Important**

- When installing etched glass, we suggest wearing clean, soft gloves. Failure to do so may result in permanent stains. It is very important that the etch surface be protected from installer's body oils (such as sweat, fingerprints, etc.). Once the glass is installed and construction ceases, the etched glass will no longer be as vulnerable to stains. If installed following these simple rules, the customer will be satisfied with their new etched glass for many years!
- Install the etched surface facing areas where it will be most sheltered. If possible, avoid exposure to the elements, (water, rain, dirt, etc.) as well as fingerprints and heavy traffic areas.
- Do not allow dirt/debris or moisture to remain on etched surfaces. Clean glass surfaces following instructions below.

*Please note when surface becomes completely wet,  
The etched glass will appear clear.*

- All surfaces should be cleaned with normal glass cleaner available through janitorial supply companies. Such spray products may include Glass Plus, Windex, or foam spray glass cleaning products.
- All surfaces should be cleaned with soft rags only. It is important that rags are clean and used only for glass cleaning purposes. These are available at hardware and janitorial supply companies. Paper products should never be used when cleaning your glass or mirrors. Their fibers adhere to the etched surface.
- **DO NOT SCRUB** or use **abrasive cleansers** on etched areas to remove dirt stains, a gentle cleaning is recommended to avoid damaging the protective coating.
- If you follow the above instructions, your glass will look beautiful for many years to come. If you have any questions about specific cleaners, or have a particularly difficult stain, please feel free to call **D&J Glass & Sign** at (636) 461-0952.

### **Sealer Warranty**

D & J etched glass sealer is unlike any other sealer in the industry. Our sealer will protect your glass for several years after application, unlike other sealers that are laquer or acrylic based that may turn yellow, peel, crack or fade over time.

D & J etched sealer was specifically designed to protect etched glass. We immediately apply the sealer after sandblasting to the virgin surface for maximum adhesion. Applying sealer to etched surfaces makes the surface easier to clean and maintain.

When sandblasted glass is cleaned properly and by following the care instructions, (avoiding the use of harsh chemicals) the sealer will last for many years. D & J Sandblasting, Inc. dba D & J Glass and Sign warrants the sealer for (1) one year after application.

Please note that the sealer has limitations. Any abusive or harsh treatment to the surface of the glass may damage the glass and / or sealer.
